Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

Task: Inspection Support

EPA will be conducting sampling at multiple locations in Wood and Juneau counties up-gradient and down-gradient of Central Sands Dairy, LLC production area and land application fields. Prior to going and doing this sampling, EPA will provide the Contractor with a Field Plan that describes: location of the facility based on address or latitude and longitude, the location of where the samples will be taken, approximate number of samples that will be taken, parameters, all necessary information on methods and QA information needed to ensure conformance with 40 CFR 136 requirements, and provide data transmissions. The Field Plan includes transporting and holding times of the samples. EPA will provide the name of the lab and the chain of custody to the lab and a copy to the Contractor.

Based on information provided from EPA, Contractor will verify laboratories that can be used for analysis of samples. For labs that samples will be driven to, labs will need to be within 1-2 hours' drive time of proposed sampling areas. For each lab, acquire pricing and contact information and ensure analytics can be provided and the time-frame that EPA will receive the results from the laboratory, if not already done by EPA. The contractor will also reimburse the labs from the contract for sampling conducted.

Deliverables –Review of Field Plan submitted with necessary changes. If not already provided by EPA a logistics sheet of laboratory pricing and summary sheet of the laboratory broken out by areas within each Region 5 State. Progress reports indicating the number of samples analyzed, funds spent, and remaining funds. Technical Contacts: Cheryl Burdett (312) 886-1463 and Ryan Bahr (312)353-4366.
